PROJECTS

Car Rental Management System

Developed a DBMS mini project using HTML, CSS, PHP and MySQL. This application helps the users to rent the cars on hourly & day basis. The users can book the cars & models based on their preferences.

Virtual File System

Developed a simple virtual file system using Python, the os module, and Linux commands, capable of creating, copying, moving, modifying, and deleting directories and files.

Static web app Deployment

Wrote a Jenkins pipeline script for CI/CD and deployed a simple web app on AWS EC2.

My Alumni

Developed an alumni portal based on microservices architecture, This platform helps both the alumni's and the institution to share each other stories & make them stay connected.
